between unit

Often, you'll

spectrum,

WordPress tests

are what we call

integration

tests. The point here isn't to argue semantics. There's an actual difference between the two that's worth highlighting.

Automated testing is running test cases where manual intervention is not required to run each one.

Online Library 6

This is usually in the form of writing test suites which have multiple test cases and a library and command line tool that runs the test suite or suites.

Unit tests are a

to test that

code is

idea behind them

is to create a

set of tests to

determine if

framework.

Unfortunately,

this framework

is designed

for WordPress

However, with
enough prodding,
it is possible
