like this discrete event system simulation solution, but end up in harmful downloads.

Rather than reading a good book with a cup of tea in the afternoon, instead they juggled with some infectious virus inside their computer.

time and marks a change of state in the system. Between consecutive events, no change in the system is assumed to occur; thus the simulation time can directly jump to the occurrence time of the next event, which is called next-event time progression. In addition to next-event time progression, there is also
