development function Shows how those involved with training and development can make bottom line contributions to the company Provides a model for calculating return on investment (ROI) for technology based programs In this era of rapid globalization, human resource development professionals in every type of organization face the problem of managing training and development across many different, often widely dispersed, sites. Training Across Multiple Locations offers a comprehensive, proven model for designing, building and assessing every

aspect of a multiple location training and development (T&D) system. Stephen Krempf and R. Wayne Pace detail how to integrate training from multiple locations into a comprehensive organizational strategy, and how corporate training can align those multiple locations with a single corporate vision. Training Across Multiple Locations draws from numerous real-life examples to show how distance learning technology—including intra-nets, web-based training, and computer-based training—is being used to manage multi-point training at companies like

Motorola, Ford, Boeing, Kinko's, Hewlett-Packard, and others. With technology, the authors reveal, training organizations are able to extend their reach and distribute training over a far wider audience in ways that may make current approaches to training less relevant and even obsolete. And perhaps most importantly, they provide a model for calculating return on investment (ROI) for these technology-based programs. Krempf and Pace present a detailed review process for evaluating the effectiveness of multiple location training and development systems and

provide specific advice on how to conduct the review and how to share data to enhance unit effectiveness. They also include a unique questionnaire that helps teams assess how well they are carrying out their T&D responsibilities and how well they are integrating their activities into the corporate business plan. Training and development functions survive by maintaining relationships with critical decision-makers at all levels in the organization. This process is often described in terms of politics and power-but Training Across Multiple Locations treats the issue

simply in terms of how to get the job done. The unique process described in this book will encourage better preparation and more informed discussions and decisions, allowing managers to better anticipate problems and stay on top of key issues.

Computer - mithilfe des Menschen. Das Ganze nennt sich CAD (computer-aided design=computerunterstütztes Entwerfen) und ist aus der modernen Industriewelt nicht mehr wegzudenken. Doch wie lässt sich sicherstellen, dass eingesetzte Hardware und Computersysteme zuverlässig sind? Durch Formale Methoden: Das sind Techniken und Werkzeuge, mit denen man berechnet, ob etwa eine Systembeschreibung in sich konsistent ist oder Anforderungen richtig entworfen und implementiert wurden. Anders gesagt: Man kann damit die Sicherheit von Hardware und Software überprüfen. Wie das konkret

aussehen kann, interessiert auch die jährlich stattfindende Konferenz „Formal Methods in Computer-Aided Design (FMCAD)“. Unter der Leitung von Ruzica Piskac und Michael W. Zu dieser Online-Tagung ist nun auch ein Konferenzband mit über 30 Beiträgen erschienen, die ein breites Spektrum der Formalen Methoden abdecken: angefangen bei der Verifikation von Hardware, nebenläufigen und verteilten Systemen und neuronalen
